Welcome to the MetaArchive Project

The MetaArchive Project is a collaborative effort among Emory University, Georgia Tech, Virginia Tech University, Auburn University, University Library of Congress. The project is funded by the National Information Infrastructure and Preservation Network, supported by the Library of Congress.

The partner institutions of this project embark on a multi-year process to develop a cooperative strategy for identifying and preserving at-risk digital content with a particular focus on cultural and history of the American South. The project's members are jointly developing: 1) a cooperative strategy for identifying and preserving at-risk digital content in this subject domain, 2) a harvested body of content from the participating partner sites, 2) a harvested body of content from the participating partner sites, 3) a collaborative preservation network infrastructure and software. The work plan for this project includes the development and workflows developed during project collaborations and the MetaScholar Initiative and other communities.

This site will serve as a central space for sharing information, reports, and other documents related to the MetaArchive.
