

ACKNOWLEDGEMENTS

The author would like to thank the following people without whom this research would not be possible:

- Professor George Filz for offering me the opportunity to work on this project. Professor Filz acted as my main advisor and contributed with his deep insight and dedication in all aspects of this research. He was a source of ideas and solutions throughout this research project. His support and friendship are greatly appreciated.
- Professor Jack Lesko for being my co-advisor. Dr. Lesko was a wonderful mentor and friend during this long journey. His enthusiasm and passion for research, teaching, and mentoring was contagious and a source of inspiration. Dr. Lesko enriched my experience at Virginia Tech by allowing me to mentor minority students at Virginia Tech. His support and friendship are greatly appreciated.
- Mr. Carl Ealy of the Federal Highway Administration helped on many practical aspects of this project including hundreds of hours of work in the field. He also provided invaluable expertise on instrumentation and data acquisition for the pile load tests carried out for this research. His support and time is greatly appreciated.
- Mr. Mike Hall, Senior geotechnical engineer of VDOT for helping throughout this project and for playing an instrumental role in coordinating the different parts involved in the VDOT bridges.
- Professor Amir Fam from Queen's University, and Distinguished Professor Sami Rizkalla from NCSU, for collaborating with Dr. Lesko in a joint durability study of axially loaded concrete-filled FRP stubs. They also contributed through their expertise on concrete-filled FRP tubes and with laboratory time and labor. Professor Fam also contributed by helping us with the interpretation of the structural aspects of the field tests carried out at the Route 40 bridge project. His contributions are greatly appreciated.
- Drs T. L. Brandon, T.E. Cousins, and J.E. Dove for serving on my committee, for reviewing the final manuscript, and for providing valuable guidance and support.

- Mr. Robert Simonds from the ESM busting lab for providing me with machine time in his lab, and for providing guidance and support during the material testing program of this research.
- The following students of Jack Lesko helped me with several tasks of the durability program: Jim Fazio, Ricardo Lopez, Steve Phifer, Theophanous Theophanis, and Aixi Zhou. Special thanks to Theo for his invaluable help at the Route 351 bridge.
- The following students from the geotechnical program collaborated with work related to this project: John Bonita, Jeremy Britton, Youngjin Park, Jessee Jacobson, and Afonso Marques. Youngjin Park was a source of unconditional help, to him my deepest gratitude.
- The geotechnical group graduate students both past and present for their great camaraderie. I am in debt to many friends from whom I have learned so much during my stay in Blacksburg.
- This work is dedicated to my wife Sandra, to my mother Maria Cristina Pando, and to the memory of my father Jose Luis Pando.
