Abstract	ii
Acknowledgments	iii
Nomenclature	xii
List of Figures	xvi
List of Tables	xxiii
Chapter 1 Introduction	1
1.1 Motivation	2
1.2 Background	2
1.2.1 Chemiluminescence	2
1.2.2 Chemical kinetics and reaction mechanisms	4
1.2.3 Combustion modeling	4
1.3 Literature Review	5
1.3.1 Experimental use of chemiluminescence	5
1.3.2 Chemiluminescence chemical kinetics	8
1.3.3 Chemiluminescence modeling	11
1.4 Research Goals	14
I Experimental Investigation	15
Chapter 2 Experimental Setup	16

2.1	Experimental Philosophy	17
2.2	Bunsen Type Burner Setup	17
2.2.1	Purpose of of Bunsen type burner setup	17
2.2.2	Bunsen type burner description	18
2.2.3	Bunsen burner instrumentation	18
2.3	Honeycomb Burner Setup	20
2.3.1	Purpose of honeycomb burner setup	20
2.3.2	Honeycomb burner description	20
2.3.3	Honeycomb burner instrumentation	22
2.4	Optical System Setup and Design	22
2.4.1	Purpose of optical system	22
2.4.2	Design method used for optical system	23
2.4.3	Optical system hardware	25
2.4.4	Final design of optical system	26
2.5	Data Acquisition System	27
2.5.1	Purpose of data acquisition system	27
2.5.2	Description of data acquisition system	27
2.6	Monochrometer Setup	29
2.6.1	Purpose of monochrometer setup	29
2.6.2	Description of monochrometer	29
2.7	Photomultiplier-tube	30
2.7.1	Purpose of photomultiplier-tube setup	30
2.7.2	Description of photomultiplier-tube setup	30
2.8	Local Chemiluminescence Traversing Hardware	31
2.8.1	Purpose of traversing hardware	31
2.8.2	Description of traversing hardware	31
Chapter 3 Experimental Procedure		33
3.1	Burner Systems Startup	34
3.1.1	Instrumentation power-up	34

3.1.2	Lighting of burner	34
3.2	General procedure for Chemiluminescence measurements	36
3.3	Optimization of Optical System	36
3.3.1	Initial lens system alignment	37
3.3.2	Monochromator end optical alignment	38
3.3.3	Final alignment	38
3.4	Global Chemiluminescence Measurements	39
3.4.1	Preparation	39
3.4.2	Data acquisition	39
3.4.3	Data post-processing	40
3.5	Local Chemiluminescence Measurements	40
3.5.1	Preparation	40
3.5.2	Data acquisition	41
3.6	Spectral Scan Chemiluminescence Measurements	42
Chapter 4 Data Processing and Interpretation		44
4.1	Spectral Content Light Scans	45
4.2	Calibration of Light Signal	46
4.2.1	Light transmission losses	46
4.2.2	Integration of OH* and CH* energy	48
4.2.3	Single wavelength measurement interpretation	51
4.3	Chemiluminescence Measurement Correction	52
4.3.1	Global chemiluminescence	52
4.3.2	Local Chemiluminescence Measurements	52
Chapter 5 Experimental Results		54
5.1	Bunsen Type Burner Measurements	55
5.1.1	Global chemiluminescence measurements	55
5.1.2	Local chemiluminescence measurements	60
5.2	Honeycomb Burner Measurements	65
5.2.1	OH* chemiluminescence	66

5.2.2	CH* chemiluminescence	67
5.2.3	Chemiluminescence ratio for the honeycomb burner	68
5.2.4	Light emission spectra for the honeycomb burner	70

II Modeling Investigation 71

Chapter 6 Adaptation of Existing Combustion Modeling Tools 72

6.1	1-D Flame Modeling using PREMIX	73
6.1.1	Introduction to PREMIX	73
6.1.2	Modifications to PREMIX	74
6.2	Chemical Kinetics Modeling	75
6.2.1	Reaction Rate Modeling	75
6.2.2	Introduction to GRIMECH 3.0	75
6.2.3	Modifications and adjustments in GRIMECH 3.0	76
6.2.4	Chemiluminescence model completion	78
6.3	FLUENT Computational Fluid Dynamics	83

Chapter 7 Bunsen Burner Model 85

7.1	Purpose of the Bunsen Type Burner Model	86
7.2	Modeling Approach	86
7.3	Bunsen Type Burner Model Components	89
7.3.1	Semi-empirical mixing model	89
7.3.2	Semi-empirical heat-loss model	90
7.3.3	PREMIX 1-D flame results	90
7.4	Bunsen Type Burner Modeling Results	91
7.4.1	Summary of modeling procedure	92
7.4.2	OH* modeling results	93
7.4.3	CH* modeling results	95
7.4.4	Chemiluminescence Ratio modeling results	98
7.4.5	Parameter variations used	100
7.5	CFD Model of Bunsen Type Burner	102

7.5.1	Purpose of CFD model	102
7.5.2	FLUENT implementation of Bunsen type burner model	103
7.5.3	Results of FLUENT Bunsen type burner model	105
Chapter 8 Honeycomb Burner Model		109
8.1	Purpose of the HoneycombBurner Model	110
8.2	Honeycomb model derivation and description	110
8.2.1	Heat balance for the fluid	110
8.2.2	Heat balance for the honeycomb solid	113
8.2.3	Heat-transfer in the honeycomb burner model	113
8.3	Honeycomb modeling procedure	120
8.4	Honeycomb Modeling Results	121
8.4.1	Comparison with experimental data	121
8.4.2	Gas and Honeycomb temperatures	127
8.4.3	Flame location	130
8.4.4	OH* and CH* chemiluminescence	132
8.4.5	Unaltered chemical mechanism	139
8.4.6	Small chemical mechanism	140
III Discussion of Results and Conclusions		143
Chapter 9 Chemiluminescence Formation		144
9.1	OH* Formation	145
9.1.1	OH* Formation path hypothesis	145
9.1.2	Detailed analysis of published research	146
9.1.3	Evidence for proposed OH* formation mechanism	147
9.1.4	Conclusion on OH* formation path hypothesis	148
9.2	CH* formation	148
9.2.1	CH* formation description	148
9.2.2	CH* modeling challenges	149
9.2.3	CH* modeling improvements	150

9.3	Summary of CH* and OH* formation	150
Chapter 10 Applying Chemiluminescence to Combustion Diagnostics		152
10.1	Interpretation of experimental results	153
10.1.1	Normalization of experimental results	153
10.1.2	Chemiluminescence as measure of heat-release rate	154
10.2	Interpretation of modeling results	156
10.2.1	Bunsen flame heat-release rate modeling results	156
10.2.2	Honeycomb burner heat-release rate modeling results	165
10.3	Application of OH* Measurements	168
10.4	Application of CH* Measurements	171
10.5	Application of Combined Measurements	172
10.6	Dynamic heat-release rate measurement	173
Chapter 11 Summary and Recommendations for Future Work		176
11.1	Summary	176
11.1.1	Understanding chemiluminescence formation	176
11.1.2	Dependence of chemiluminescence on other flame parameters .	177
11.1.3	Quantitative modeling of chemiluminescence	177
11.1.4	Measurement applications	177
11.2	Recommendations for future work	178
11.2.1	Unsteady measurements and modeling	178
11.2.2	Flame configurations	178
11.2.3	Fuel variability	179
Appendix A Modified GRIMECH 3.0 Reaction Mechanism		180
Appendix B PREMIX Modifications		195
B.1	Program structure modifications	196
B.2	Description of added keywords	197
B.2.1	HOCO - the honeycomb burner problem	197
B.2.2	RADF - radiation and other heat-loss	198

B.2.3	INCR and IGOL - small step parameter variation	198
B.2.4	EXCE - writing output	199
B.2.5	Programming new keywords	199
Appendix C	Optical System Design	200
C.1	Geometrical Optics	201
C.2	The Two Lens System	201
C.3	Light Collection	203
