

	behavior	design	general
question	<p>Do you think a new design may help to establish a better relationship with the child, making the exam procedure easier?</p> <p>May a design focused on children interfere with the examination procedure?</p>	<p>What are the professional needs in the pediatric examination room?</p> <p>Does the pediatric exam room need to be redesigned? Why?</p>	<p>What is the physician's point of view of the pediatric examination room?</p> <p>Have you ever thought of a child centered design for pediatric equipment?</p>
answer	<p>"may or not" interfere</p> <p>"probably help much"</p> <p>"It could potentially interfere, and that would not be desirable"</p>	<p>"...a place to record information about the child history, a place to examine the child and a place where the physician can talk to the patient/parents"</p>	<p>"I don't think pediatricians think about the exam room except in "cute" ways, putting up images of dolls or puppies ..."</p> <p>"It's a good idea, let us know when you come up with something"</p>
free comments/story	<p>"I let them play with this" (her stethoscope)</p> <p>"I look for something I can show to distract them, colors or pictures"</p> <p>"We deal with all kinds of cultural levels"</p> <p>"we spend a lot on books and they disappear".</p>	<p>"Need more room, the whole family is coming to check-ups"</p> <p>"We need to have supplies and order, the family is sitting and the doctor goes around"</p> <p>"kids love worn out paper to tear and holes on vinyl pads"</p>	<p>"some equipment already exists but it's very expensive" "put your money where it's essential for health care first"</p> <p>"it has to be for the child and practical"</p>

## Interviews to pediatric healthcare professionals
