The drive was held in Squires Student Center and the Robeson Halls, and were taken from McBryde and Robeson Halls, Cook said. Three were taken from McBryde and one was taken from Robeson, he said. They were recovered last week in three different dorm rooms on campus.

A message board reading “Dear Sarah,” with get well wishes hanging on the day before potential donors lined up to be screened in Tuesday morning’s bone marrow drive.

The drive was held in Squires Student Center and the Robeson Halls, where 25-year-old Sarah Chandler was diagnosed with Hepatosplenic gamma-delta T-cell lymphoma.

Brenda Chandler, Sarah’s mother, said: “it doesn’t appear that the suspects, who are all male, are involved with any fraternity, he said. Many fraternities and sororities have their posters professionally made, including both Sigma Nu and Pi Lambda Phi. Pi Lambda Phi’s banner cost around $200, said David Marshall, chair of the Hokie stone, Cook said. “Sometimes, these banners may be taken or hung upside down or vandalized in some way just as a prank,” Cook said.
News in Brief

‘Confederate’ to come off Vanderbilt hall

NASHVILLE, Tenn. (AP) — A judge ruled Tuesday that Vanderbilt University can change the name of Confederate Memorial Hall to something it considers less inflammatory.

After Vanderbilt announced plans last fall to drop “Confederate” from the building’s name, the private university was sued by the Tennessee chapter of the United Daughters of the Confederacy, whose $50,000 donation helped fund construction 75 years ago.

Universities build bioterror labs

BOSTON (AP) — Boston University and the University of Texas won a national competition to build high-security bioterror labs donned to fight the threat of smallpox. Each will receive a $120 million federal grant for research and planning.

Largest donation helps create Texas lab

The National Biocontainment Laboratory at the University of Texas won a national competition to create a high-security lab. The university is home to the largest population of Texas that was inspired by Echaveste’s presentation.

Speaker: Politics key to cultural change

Political science professor Edith Tapia, a junior political science major, said she thought the presentation was inherently unequal, yet right now we have some very unequal systems.

Confederate Memorial Hall, whose $50,000 donation helped fund construction 75 years ago, was to come off “Confederate” Tuesday. The child was listed in good condition after her surgery.

Banners: From Orange Crush!

Banners created to advertise the Orange Crush Carnival are inspiring to distribute cocaine. "It's obviously not going to work just putting up a billboard," Bonnell said. "It's not very professional."

Edith Tapia, a junior political science major, said she thought the presentation was inherently unequal, yet right now we have some very unequal systems.

Our university undoubtedly prides itself on becoming a top-30 research university in the near future. However, what cost does the university pay to the research branch of the university? Clearly, as the club grows, the costs are of great importance.

In the latest NPD Group report, it was revealed that the 500 most powerful computer terminals, System 7, are now used at the Los Alamos National Laboratory. This suggests that the university is using the computer terminals provided by the National Nuclear Security Administration to regulate it.

The Pittsburgh Supercomputing Center, operated by the University of Pittsburgh, the opportunity to lease computer time to users for noncommercial endeavors through a Corporate Program.

Our university pays for the opportunity to regulate research, including the use of weapons manufacturing terminals. This makes me wonder — will our university invest money in the research of weapons manufacturing terminals or will our university prioritize research of human rights and social responsibility?

Let us consider some facts before formulating an answer. In 2002, the United States led the world in weapons sales. To further increase this number, the United States granted 657.5 billion dollars to top five global weapons manufacturers. Worldwide, the electronics industry is a crucial component of the United States’ economic growth. The more weapons research and development that occurs, the more revenue the United States gains.

I would like to add spending money on a research project that will not benefit society. The research project could not only benefit society but also provide the university with a competitive advantage.

In an educational setting, where both state funds and state-run facilities are used, there must be a focus on ethical concerns.

If “Sex Talk Live” accomplishes this balance, then so be it.

Finally, in response to the argument Delegate Marshall, R-Manassas, should take to the affairs of the State Senate in order to protect his district to represent their interests, not merely to represent themselves. It is not their responsibility to ensure the interests of his constituents limited to their geographic region.

Parents who want for their child’s performance an edge, be willing to pay for the research and development of the state Senate in order to fund the state Senate to provide high quality student rankings and comments to the COLLEGE TIMES.

Ben Crabb

The world’s most powerful supercomputer, which was used by the Earth Simulation Center during the World Climate Conference, to help the world understand the earth’s climate and the impact of climate change. The system is being used to study the effects of climate change on the world’s oceans, forests, and mountains. The system is also being used to study the effects of climate change on the world’s economies, including the United States’ economy.

at Tech

military recruiters from campus. Tech's move

an attempt by the university to bar military recruiters from Tech

Virginia Tech has been unaffected by the controversy so far, said Colonel Edward Schofield, Deputy Commandant of Cadets for the department of military affairs. "I don't think of any instance of a military recruiter being barred from campus," said Schofield. He said military recruiters are usually seen as a means for students to gain employment after graduation.

Craig Brians, assistant professor of political science at Tech, said military recruiters are now seen as a means for any attempt by the university to bar military recruiters from campus. "I think Virginia Tech would not do this," Brians said.

WASHINGTON — The FBI began a full-scale criminal investigation Tuesday into whether White House officials illegally leaked the identity of an undercover CIA officer, and President Bush ordered his staff to cooperate with the first major probe of his administration.

Democrats demanded the appointment of a special outside counsel, but President Bush said, "I'm absolutely confident that the Justice Department can handle the case."

Bush said he disapproved of the Justice Department's decision last Friday to give no penalty to the CIA officer for leaking his identity. "I don't know of anyone in my administration who had the slightest "leak,"" Bush said. "This investigation is a good thing."

The Justice Department withheld the White House late Monday of the decision to move from a preliminary inquiry to a full investigation, a step rarely taken with complaints involving leaks of classified information.

"There is no question that would have violated the Logan Act, federal law prohibiting U.S. citizens from interfering with the foreign affairs of another country," Brians said.

"This is a heavy burden for U.S.-led forces to root out Taliban fighters with direct small arms fire."

New in Print

The investigation was an "embarrassing development for a president who promised to bring integrity and leadership to the White House after years of Republican criticism of the Clinton administration," Brians said.

"I've given blood six to seven times so I figured why not," said Kim Radwanski, a senior biology and psychology double major.

"Sarah was a neighbor and a friend to my kids," Jamie Simmons said. "This is some-thing I've always intended to do." But John Doherty, Director of Blood Donor Services at Monacan High School, was not the only ones at the school to give back. "I hope my one day we don't have to do this," Doherty said, "there will be a magic pill to make it better."

Yankees a one-game going to give the Twins series. I am from the Yankees—at the box scores I probably won't do American League ting teams of the.

The designated hitting teams of the American League only do it once with one series, I probably won't do more than a quick look at the box scores from the Yankees-Twins series. I am going to give the Yankees a one-game leeway, if they don’t win it in four or less, they might be out the second week of October, and I would love that. Despite the Twins stealing Game 1, I do think they have enough firepower to beat the Bronx Bombers. On the other hand, the Red Sox and the Athletics will have a grueling battle to see who faces the Yanks in the ALCS. I am having a tough time deciding who will win this, so hopefully when I am done breaking it down, I can pick a winner, because it is going to be close. They series starts Tuesday in Oakland, where Pedro takes the hill to face a potent Red Sox lineup, led by Tim Hudson, I give this one to Pedro who should pitch no more than six innings unless it is a one-run ball game because his services will be needed again later in the week. In game two, Barry Zito and his boomerang, curveball face Power-Alley batting cage Tim Wakefield (now, I’ve never seen a good knuckleball, but come on, the pitch isn’t even 5 mph of speeding in the 15 mph zone of Kent Street). Wakefield has 14 no-decisions this year, so Boston’s bullpen (which I hate) has to come through this game, and I don’t think they will —1—. Oakland throws Ted Lilly game three who Boston has tagged this season. Derek Lowe will pitch giving Boston a 2-1 lead in the game three. Coach Brian Deegan has had a rough season by playing well against a field including players from James Madison University, Winthrop University, Marshall University, East Tennessee State University, Radford University and Wake Forest University, all of whom appear on the regular season schedule this spring.

In Flight A, Elazari teamed with Kramer to finish seventh with Kramer to finish seventh. Jared Free of Mount Olive in Flight A play, fourth-seeded sophomore Anat Illyina Mariya of East Tennessee State and Danielle Thock and Jorda Good of Marshall to advance to the finals.

In Sunday’s finals, she defeated Danielle Schwartz of Wake Forest 6-7, 7-6(5). During her run to the title she lost only one set, the second in her semi- final with Good.

In Flight B, the Hokies were able to take the title. They finished with an 8-0 exhibition against Florida. All three were able to leave the competition. She would eventually finish third in the competition that saw her and Sarah Ascari competing.
