

DLA Annual Report for 2001/2002

For the first time since the Scholarly Communications Project and the Special Collections Department merged, the Digital Library and Archives began to work as a cohesive unit. With all vacancies filled and the addition of term appointments, the department has had time to plan (see DLA Goals App. A) for the future instead of just reacting to current demands or crises. DLA preserved, organized, and made accessible historical and current resources, and provided reference, instruction, and access to the unique resources in our rare books, manuscript, and archival collections. In addition, DLA worked with the university community to help them create online resources and to use digital library resources and services. More ETDs and digital images were available through systems designed and maintained by the department. Like University Libraries, DLA is dedicated to meeting the university community's information, curricular, and research needs wherever they are located. DLA collaborated with members of the university community to collectively position the university as a top-tier research institution.

APPENDIX A: DLA PLANNING: GOALS

The Digital Library and Archives is a merger of the Scholarly Communications Project (SCP) and the Special Collections Department. A staff of three faculty, three staff, and numerous wage employees preserve, organize, and make accessible the historical as well as the timely resources housed in the department. The Reading Room serves on-campus library users 35 hours per week to provide reference services and access to the unique and primary resources in our rare books, manuscript, and archival collections. These materials are selectively available as online catalog records, finding aids, and digital documents. We also work with the university constituency to help them create online resources such as electronic journals, and to use library services such as electronic reserve with its centralized access to course materials. In addition, Virginia Tech's electronic theses and dissertations and digital images are available through systems designed and maintained by DLA.

DLA has identified the following goals:
