MEASURING UP

For several years now, I've enjoyed having the opportunity to respond to an invitation from the library faculty and staff to make a presentation focusing on the just completed year. Usually there is a good-natured groan from the audience when the lights click off and the *PowerPoint* clicks on. Experience has taught them to brace themselves for the copious charts, graphs and tables that will be coming their way.

Much of what we are able to accomplish in any year is qualitative in nature and not to be measured -- getting that just right book on the shelf so a student has an *Aha!* moment of finding a chapter that clarifies the class lecture heard earlier in the day, or the relief of connecting with a librarian who walks you through the maze of

online and print information resources so you can know that there *is* enough good information for you to complete your project at the end of the term.

But much of what a library is involved in does lend itself to assessment of some kind, whether it is counting, comparing, or seeking direct information from our user community. The ability to analyze, assess, and measure operations and outcomes is important. It helps us see trends in a rapidly changing world; assures local, government, or private funding sources that we are maximizing the resources they have given us; and contributes to our better understanding the needs of our users.

Because we believe that assessment is so important for you and for us, we have made it part of each staff member's assignment this year and will continue to do so. We always welcome your input in letting us know how we measure up to your expectations. Copious charts, graphs, and tables follow.

Eileen E. Hitchingham ~ Dean, University Libraries

COLLECTIONS

Libraries awarded \$17,000 to support College of Natural Resources

The *Knapp Foundation* of St. Michaels, Maryland awarded the Libraries \$17,500 in funding to support the purchase of library resources for the Department of Fisheries and Wildlife in the College of Natural Resources. Irene Glennon, the College Librarian awarded the grant, will spend the money to update core collections in freshwater fisheries, wildlife and conservation. Joseph Palmer Knapp was a generous supporter of public education and wildlife conservation in the southeastern region of the United States.

New research resources

Some major online research resources added to the Libraries this year include journals from the American Psychological Association, *Nature* and its seven associated monthly publications, the JSTOR business collection, 146 journals from Wiley Interscience, and 187 journals from Kluwer Academic Publishers. Researchers and reviewers will be more able

to determine the top journals to publish in and the impact factor for publications they are reviewing by using the *Journal Citation Reports* from the Institute for Scientific Information which have been added to the database collections this year.

Collection use

The use of online library resources by the VT community continues to grow. Online articles or items accounted for 37% of known item uses last year, and 44% of use this year. External circulation grew moderately, from 28% of known use to 30%, while use of items in the Libraries (primarily non-circulating serials) declined, from 32% of all known uses to 26%.

Ingles Family Collection

Special Collections has received a gift of the Ferry Hill Ledger (1797-1804) and 3 of 6 volumes of the Ingles Family Bible (1823). This gift is the first available documentation of Mary Draper Ingles and William Draper, operator of Ingles Ferry, Ingles Ferry Hill Tavern, and a blacksmith shop in the New River Valley. Mary Draper Ingles was kidnapped at the Draper Meadows massacre which took place at what is now the Virginia Tech Duck pond. Mary's escape from Shawnee Indian captivity and her heroic 800 mile walk back home have been described in a number of books and dramas.

This early documentation of the Ingles family's extraordinary history, its ferry, and related enterprises, provides scholars with unparalleled material for the study of Southwest Virginia.

VT's online use patterns demonstrate interests in a broad range of scholarship

Library databases with 1,000 or more searches by VT users over a 10 month period (excludes searches in dbases that had articles)

An examination of the variety of databases VT users search, and the sources they use to get online articles, reveals that we are a community of scholars with a wide range of research and curricular interests.

We are also aware that a significant number of these resources that are supporting research interests come to the VT community through VIVA funded projects. VIVA (Virtual Library of Virginia) is a legislatively funded consortium of the Commonwealth's college and university libraries. With state cutbacks affecting VIVA's funding, we will be challenged to continue to offer the essential resources that may be eliminated by VIVA next year.

SERVICES

Interlibrary loan services praised

The interlibrary loan unit's ILLiad service continues to receive customer kudos. The ILLiad service borrows or gets copies of materials from other libraries for the VT community, sends VT materials to other libraries, and sends both borrowed materials and items from the VT library to our own community of extended campus users.

ILLiad is the primary support activity for supplying information resources to our faculty and students who are not situated in Blacksburg. In the first ten months of this year 3,931 books and 9,885 article copies were shipped from the Blacksburg collections to our students, faculty, and staff located elsewhere. For the third year in a row, a survey of students, faculty and staff on the extended campus found overwhelming satisfaction with services provided through ILLiad. Fully 87% of those using the service rated it "Very good", with an additional 11% rating it "Good." Less than 2% of customers thought the service to be only adequate, or unsatisfactory.

The ILLiad software originally developed in the interlibrary loan unit is licensed through VTIP, and is among its top three income-producing properties. Almost a third of the Association of Research Libraries members use ILLiad software

14,000+ Net Library titles now in Addison

Net Library is a fully searchable collection of electronic books that can be used without special hardware or readers. We have had access to this collection for several years, but were not able to maximize its use because the materials were not cataloged in Addison, the Libraries' catalog. Most users expect to find books listed in the catalog. This year 14,236 catalog records were added to Addison for these materials. Our users can now identify a netLibrary title along with other more traditional materials, and if interested in the item click to the book from the catalog record.

The netLibrary collection includes such titles as *The Global Information Society, Ceremony and Community from Herbert to Milton*, and *Philosophical Perspectives on Music*.

Assistance where and when it is needed

Like many other research libraries we are finding that students are increasingly less inclined to initiate a traditional reference transaction at a reference desk. They continue to ask for assistance in locating materials and in finding their way around, but we see fewer instances of students asking about how to find good, relevant information on a particular topic.

What students miss in bypassing the reference interaction is the chance to have a discussion that can help them focus their searching activity. Focused searches don't deliver too much information as is often true for a web search – an experience that has been characterized as like trying to drink from a fire hose.

We understand that it is easier to change our approach to service than to try to change the expectations of 25,000+ students. To do this we have translated the opportunity for traditional reference interactions to other, more student-focused venues.

We see increasing growth in the use of such services as LiveRef, which provides students with a real-time web connection to a librarian; ASKUS, which gives e-mail reference for more complex questions requiring lengthier responses; and *One2One* which provides student-to-student counseling on research topics. We have just initiated a process to review our subject pages to make them more useful to students looking for information on particular subjects. We will be assessing the effectiveness of the pages as we make changes.

Ultimately we are attempting to address an issue of delivering services that allow students personal control over the way that they access information. We appear to be having some success in doing this. In the LibQUAL+™ 2002 survey our students noted less of a gap between what they perceived as our delivery of services giving them control over information access and the level of service that they would truly want in that area, than did students at other ARL libraries in the study.

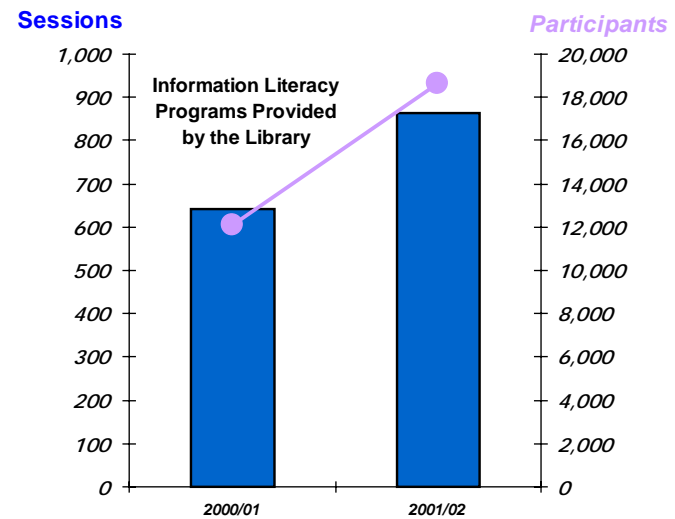

INFORMATION LITERACY

Information Literacy at VT

Information literacy is commonly defined as "the ability to locate, evaluate, and efficiently use information" and is comprised of several components: research skills, critical thinking skills, and computer literacy.

Students have to be able navigate the Libraries and our print and electronic information resources. They need to be able to evaluate, analyze, and synthesize information to come to conclusions. Finally, they need to be familiar with computers and computer applications, not only to find and retrieve information but also to communicate their findings.

Lifelong learning is also encouraged through the promotion of information literacy. Students develop an appreciation of how these skills will assist them in their future coursework and careers, along with developing an understanding of the impact information has on society and their lives. Information literacy assures that our students can acquire the skills that allow them to become viable participants in a knowledge-based society.

The Libraries' current program in support of information literacy includes the provision of a growing number of classes, tours, and presentations for users.

Frequency of library use from LibQUAL+™ 2002 results

While online use at VT is growing and use of the library building continues to be high, the frequency of both physical and electronic use by the VT community appears to be somewhat lower than that indicated by library users at other research universities.

In examining early data from the LibQUAL+™ 2002 survey we find that VT undergraduates, graduate students, and faculty reported less frequent library use (daily, weekly) than did the same categories of users at other participating ARL (Association of Research Libraries) sites. This was true for both on-site use of the library and for electronic use.

VT undergraduates in particular reported significantly less daily or weekly use than did undergraduates at other research libraries. The need for undergraduates to use library resources is associated with

what is expected from them in their coursework. Library instructional faculty will work with the Core Curriculum Committee to explore the introduction of a required information literacy module into the core curriculum.

First-Year students and information literacy outreach

First-year students present a particular challenge for information literacy efforts. For many their contact with the Libraries may come as part of introductory English or Writing classes which they may not see as being specific to their major area of concentration. Teaching engineering or business students how to do research in an area of literary criticism may challenge the interests of a few, but most will not be able to make a link to how the pattern of searching that they use in this subject might transfer to another discipline.

To counter this lack of connection, the first-year instruction team for the Libraries has made several changes in program offerings.

First, the goals of the sessions are better articulated. Students know that whatever the topic, their learning goals are to develop the ability to:

- locate materials and service points;
- find their way around the library web site;
- use *Addison* to identify a book on a topic and then locate it in the library;
- find articles on a topic following a sequence from database searching through locating it on the shelf or online; and
- evaluate web sites and pages for validity and appropriateness to topic

Second, student contact in the general English and Writing program has been broken into two events. Tours are offered twice a week on a regular basis and an instructor can request that her/his students sign-up for a tour before an in-class session. Tours are about where things are, not content. Instructional sessions take place in the library classroom and provide hands-on exercises for the students. These sessions focus on

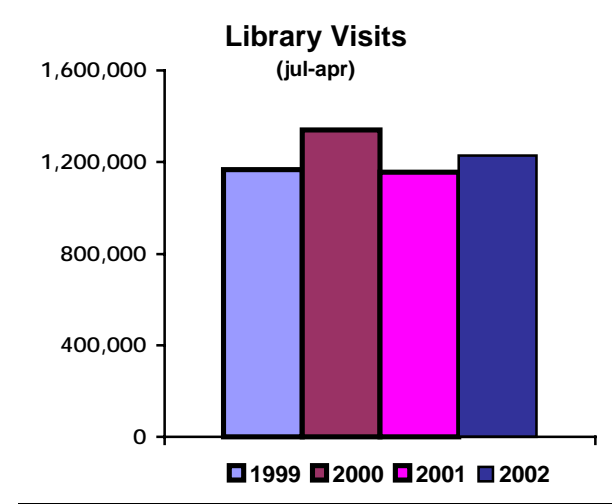

content but emphasize that there is a pattern in finding and using information that applies to satisfying many kinds of information needs. Finally, many College Librarians are collaborating with faculty in their Colleges to identify introductory courses that may provide an opportunity to introduce an information literacy component. For example, the College Librarians for the College of Human Resources and Education have worked with their College faculty to incorporate an information literacy component into HR2984, an introductory course required of all freshmen.

PHYSICAL SPACE

Library as a place

There is a lot of talk about virtual libraries. Continuing growth in the use of online resources may sometimes encourage people to think that the need for a physical library is less important. That does not seem to be true for Virginia Tech. The library as a place to visit and use continues to be important to the VT community.

More than a million library visits were noted for the Libraries through the first ten months of the year. This appears to reaffirm the continuing importance that library users attach to working in physical library spaces, even as their use of electronic resources continues to grow.

This year, with collaborative support from the College of Architecture and Urban Studies, we are completing a small renovation project in the Art and Architecture Library in Cowgill Hall. Attractive and more functional shelving was obtained from Library of Virginia surplus. The project will provide for more organized collections, space for circulation activities, a slide collection room, and office space for the College Librarian in the Art and Architecture Library. We are also in the first stages of planning for an expansion of the Special Collections area to accommodate growing collections and to incorporate scholarly space for the Center for the Civil War.

OTHER ISSUES

LibQUAL+™ 2002

A few sections in this report mentioned results from the LibQUAL+™ 2002 study released shortly before completing this document.

LibQUAL+™ is a library survey tool for measuring total quality service as understood by library users. This is the third year in development of the tool. Development activity has been funded by a FIPSE grant to the Association of Research Libraries and Texas A&M. The Virginia Tech community participated in the pilot project in Spring 2000 when the library served as an invited member, and VT has continued as a participant in both 2001 and 2002.

LibQUAL+™ includes 25 questions related to four dimensions of library service: access to information, quality of service, the library as place, and personal control for the user in accessing information. The survey also provides for three questions related to the overall quality of library service, satisfaction with treatment, and satisfaction with support. Respondents may also provide unstructured comments.

LibQUAL+™ gives the library a method to make longitudinal studies of its clientele and to benchmark against similar institutions. We will be able to report fuller results to the university community in the early part of 2002/03.

Strategic Plan

The Libraries' strategic plan *A Research Library for a Major University The Strategic Plan for the University Libraries of Virginia Tech* was completed in December, 2001. The goals and objectives of the plan focus on seven areas considered crucial to creating and sustaining a library that can support the university initiatives in research and scholarship, graduate education, undergraduate education, and outreach.

The *Plan's* areas of concentration include:

- Collections
- Services
- Information Literacy
- Preservation
- Systems
- Physical Spaces
- Staff

In 2002/03 we will work with the university community to develop action strategies for moving the plan forward.

Library Review

In December 2001 the Provost initiated a library review process to provide him with input and recommendations relevant to enhancing the Libraries' ability to deliver collections and services appropriate to the needs of a major research institution.

An internal team of library faculty and staff documented current library practice and issues in a review document. This report was shared with the University Library Committee for input before it was sent to the Provost on March 15, 2002. The report and supplemental materials became the working papers for an external review team selected by the Provost.

The library report was developed in several sections. These included:

- Funding
- Organization
- Assessment
- Development
- Collections
- Services
- Information Literacy
- Preservation
- Systems
- Physical Spaces
- Staff

Members of the external review team included:

- Dr. Deanna Marcum, President of the Council on Library and Information Resources (Coordinator)
- Dr. Fred Heath, Director and Dean of Libraries Texas A&M
- James Williams, Dean of Libraries, University of Colorado, Boulder

The review team visited Virginia Tech April 28-30, 2002. During this visit they met with the Provost, the Dean of Libraries, the library review team, other library staff, the University Library Committee, students and researchers, and College Deans and university administrators. The review team's report and recommendations will be presented to campus constituencies early in the fall term.

Library restructuring and reallocation to support "top 30" goal

Like other university units the library was asked to prepare a plan appropriate to targeted budget cutbacks but also consistent with moving forward with the goal of providing support for Virginia Tech's faculty and students as they participated in positioning Virginia Tech as a major research university within a decade.

At the end of this process we were extremely pleased to learn that the University will not only reduce the library budget, but it will also supplement it with reallocated funds to prevent serials cancellations in 2002/03. Library changes in operations and staffing that were proposed to generate funds for reversion will occur, but the funds will be reallocated internally to collections rather than being returned to a central pool. These changes include:

- Consolidation of Media services with Circulation/Reserve
- Consolidation of Reference and Information assistance at one service point in the Newman lobby
- Shorter hours of service for the Geosciences Library
- Reallocation of a staff member from the Art and Architecture library
- Reversion of library faculty positions
- Reallocation of wage and position funds associated with diminished library hours
- Reduction of operating and equipment funds in library units

While carrying out these reallocations and still providing services will present a challenge, we are confident that sustaining our ability to grow our research collections is the best move that we can make at this time to support overall university goals.
